

Homework 2

Phoneme Classification

- Description:

將一段語音訊號輸入進行 Phoneme Classification，其中每段為長度39的向量，並給予前後五段的數據，因此一個特徵為 $11 * 39 = 429$ 維度，如下圖。

共 39 組類別如下圖。

Class	Phoneme	Example	Class	Phoneme	Example	Class	Phoneme	Example
0	iy	<i>beet</i>	13	l	<i>lay</i>	26	dx	<i>muddy</i>
1	ih	<i>bit</i>	14	r	<i>ray</i>	27	g	<i>gay</i>
2	eh	<i>bet</i>	15	y	<i>yacht</i>	28	p	<i>pea</i>
3	ae	<i>bat</i>	16	w	<i>way</i>	29	t	<i>tea</i>
4	ah	<i>but</i>	17	er	<i>bird</i>	30	k	<i>key</i>
5	uw	<i>boot</i>	18	m	<i>mom</i>	31	z	<i>zone</i>
6	uh	<i>book</i>	19	n	<i>noon</i>	32	v	<i>van</i>
7	aa	<i>bob</i>	20	ng	<i>sing</i>	33	f	<i>fin</i>
8	ey	<i>bait</i>	21	ch	<i>choke</i>	34	th	<i>thin</i>
9	ay	<i>bite</i>	22	jh	<i>joke</i>	35	s	<i>sea</i>
10	oy	<i>boy</i>	23	dh	<i>then</i>	36	sh	<i>she</i>
11	aw	<i>bout</i>	24	b	<i>bee</i>	37	hh	<i>hay</i>
12	ow	<i>boat</i>	25	d	<i>day</i>	38	sil	silence/closure sounds

- Architecture :

簡單的 Linear + LeakyReLU + BN + Dropout 模型

```
import torch
import torch.nn as nn

class Classifier(nn.Module):
    def __init__(self):
        super(Classifier, self).__init__()
        self.net = nn.Sequential(
            nn.Linear(429, 2048),
            nn.LeakyReLU(),
            #nn.ReLU(),
            nn.BatchNorm1d(2048),
            nn.Dropout(0.45),
            nn.Linear(2048, 2048),
            nn.LeakyReLU(),
            #nn.ReLU(),
            nn.BatchNorm1d(2048),
            nn.Dropout(0.45),
            nn.Linear(2048, 1024),
            nn.LeakyReLU(),
```

- HyperParameter :

	Value
BATCH_SIZE	2048
VAL_RATIO	0.01
learning_rate	0.001
num_epoch	64

- Criterion : CrossEntropyLoss ()
- Optimizer : NAdam
- Standard:

#	Team Name	Notebook	Team Members	Score ?
📍	----- strong baseline -----			0.76023
📍	----- simple baseline -----			0.68334

- Result:
 - Private Score:0.75176
 - Public Score:0.75246
